

FINANCING GUIDE / 11

Business Debt Refinance & MCA Restructuring

A practical guide to evaluating whether existing business obligations can be refinanced, consolidated, or restructured into a more manageable capital structure.

Business debt refinance is not simply about replacing one obligation with another. The objective is to evaluate payment burden, remaining balances, cost, term, collateral, business cash flow, and whether a new structure creates a meaningful improvement.

For businesses carrying merchant cash advances or other high-frequency obligations, FLS first explores longer-term refinance, term-loan consolidation, SBA refinance where eligible, secured restructuring, or other appropriate alternatives before recommending additional short-duration capital.

Common use cases

- Consolidate multiple business obligations
- Replace eligible daily or weekly payment structures
- Refinance eligible MCA balances
- Refinance equipment debt where collateral supports a new structure
- Extend repayment term where a qualifying program improves cash flow

HOW LENDERS LOOK AT IT

What typically drives the financing decision

Current debt

Balances, payoff amounts, number of positions, payment frequency, remaining term, and whether any obligations are in default.

Business cash flow

Revenue, deposits, ending balances, profitability, and ability to support the proposed replacement payment.

Credit and history

Recent payment history, credit profile, liens, defaults, and bankruptcy can affect available refinance paths.

Collateral

Equipment, real estate, receivables, or other assets may create secured restructuring options.

Net benefit

The new structure should be evaluated for payment relief, term, total cost, prepayment provisions, and overall effect on the business.

PREPARING YOUR REQUEST

What to have ready

Requirements vary by program, but a complete and organized package helps FLS identify the right path and reduces unnecessary back-and-forth.

Debt package

Current statements, contracts when needed, payoff letters, payment history, and a complete debt schedule.

Financial

Recent business bank statements, P&L;/balance sheet for larger requests, tax returns when required, and current cash-flow information.

Collateral

Equipment details, real-estate information, A/R schedules, or other collateral documentation if the refinance is asset-based.

PROCESS

From request to funding

1 Map current debt

Build a complete picture of current balances and payment burden.

2 Assess capacity

Determine the business's sustainable payment capacity.

3 Evaluate paths

Evaluate term/refi, SBA, secured, unsecured, and specialty restructuring paths.

4 Compare structures

Compare the new structure against existing obligations rather than focusing only on approval amount.

5 Close with clarity

Proceed with payoffs and closing only after the borrower understands the approved terms and expected benefit.

WHAT CAN STRENGTHEN THE REQUEST?

Current payments, stable deposits, improved credit, available collateral, accurate payoff information, and a refinance request that produces a clear cash-flow benefit can strengthen the case.

Find the right business debt refinance & mca restructuring path

FLS Capital Advisors works across multiple financing sources rather than forcing every request into one program. Answer a few questions about your business and financing objective, and a specialist will review the paths that may fit.
