

FINANCING GUIDE / 04

# Fix & Flip Financing

A practical guide to short-term financing for the acquisition and renovation of non-owner-occupied investment property.

Fix & flip financing is designed around the investment project rather than the borrower's personal residence. The lender generally evaluates the purchase basis, renovation scope, as-is value, after-repair value, investor experience, liquidity, credit profile, and exit strategy.

Because leverage can change based on experience and transaction strength, a headline maximum should never be treated as an automatic advance for every project.

## Common use cases

- Acquire a distressed or dated investment property
- Finance purchase plus eligible renovation costs
- Complete a value-add renovation for resale
- Refinance an eligible in-progress investment project
- Bridge a property until sale or long-term refinance

### HOW LENDERS LOOK AT IT

## What typically drives the financing decision

### Purchase basis and value

Purchase price, as-is value, and whether the acquisition basis is supported by the market.

### Rehab and ARV

Detailed scope, construction budget, expected after-repair value, contingency, and project feasibility.

### Investor experience

Completed projects can affect leverage and program selection; first-time investors may receive more conservative structures.

### Liquidity and credit

Available cash, reserves, credit profile, existing obligations, and ability to handle overruns or delays.

### Exit strategy

Expected resale, refinance, or rental exit and the timeline needed to execute it.

### PREPARING YOUR REQUEST

## What to have ready

Requirements vary by program, but a complete and organized package helps FLS identify the right path and reduces unnecessary back-and-forth.

**Property**

Purchase contract, property address/details, photos, preliminary title information, and valuation support as requested.

**Rehab**

Detailed scope of work, line-item budget, contractor/GC information, and project timeline.

**Borrower**

Entity documents, application, liquidity verification, credit authorization, and experience schedule where applicable.

## PROCESS

# From request to funding

### 1 Analyze the project

Analyze purchase price, rehab budget, and expected ARV.

### 2 Calculate leverage

Calculate requested leverage against cost and value.

### 3 Review the borrower

Review experience, liquidity, credit, property type, and exit.

### 4 Route the request

Route to the best-fit fix-and-flip/bridge program.

### 5 Close & fund

Complete valuation, underwriting, closing, and construction-draw requirements if approved.

#### WHAT CAN STRENGTHEN THE REQUEST?

Buying below market, a realistic rehab budget, conservative ARV, adequate reserves, relevant experience, and a clear exit can materially strengthen a project.

## Find the right fix & flip financing path

FLS Capital Advisors works across multiple financing sources rather than forcing every request into one program. Answer a few questions about your business and financing objective, and a specialist will review the paths that may fit.
